Project Title :-

MedCare

Project Glimpse :-

Our project "MedCare" focuses on the services needed in a hospital. From the basic services like making appointments and calling ambulance to the advanced services like pharmacy and blood donations, our website has it all to make the process easier for the patients.

Project Description :-

The website has a hospital in the background. It presents the doctors of this hospital and their specialities and their availability to make appointments. It also shows the pharmacy of the hospital and the medicines available. It shows the tests and specific services that the hospital

provides. The website also shows their phone number to call for ambulance as well as the national helpline. A person can also donate blood if they want to.

Target Features :-

- Doctors and their specialities.
- Making appointments.
- Donation of blood.
- Call for ambulance.
- Pharmacy.
- Tests and services.

Advantages :-

- People can avail the services to a lot extent from their home.
- Avoids confusion regarding services and their availability.
- Helps the hospital in better management.

Future Scope :-

During recent times , we have seen that the hospitals are much needed and during tough times they can be over-crowded. To provide convenience to patients and their families , we need a more systematic and arranged medical architecture. In the lieu of this, more hospitals can provide their services on this blueprint.

Limitations :-

Only has one hospital as their resource.
