Project Title:-

Students stuff

Project Glimpse:-

Student stuff is a platform where students can buy, sell and donate study related material .It is an online shop for students to get the desired things.

Project Description:-

Student stuff acts as a middleware between buyer and seller .It is a user friendly and easy to use. Once registered to the application user can post ADD. Users are allowed to post a free add on the application. Once this is done all you have to do is sit back and wait for a buyer.

Target Features:-

- This application provide a better platform to students to get the stuff which will help in better studies, students can also give their materials for free if they wish to do so.
- We have seen that many students used to sell their books, notes and other study material into the trash, instead of this they can visit and sell their materials on this application and can also donate it.

Advantages:-

- It's much better if buyer and seller are from same intuition. Most of time they have related stuff.
- Shopkeeper take stuff from seller with cheaper price and sell it to buyer with high margin. As there is no middle man both have win-win situation.

Future Scope:-

- We have planned to launch this application at our college level if it is successful then we will launch it in other colleges.

Limitations:-

- Inconvenient if party are at far distance.
- User have to pay by own way.
