Project Title :-

Bid N' Build

Project Glimpse :-

People can give their requirements for the customised product they want, according to the requirement the companies could place their bid. Later user can choose the appropriate deal.

Project Description :-

In India so far no popular site is providing a platform where people could put their requirement for customisable product and companies could serve. So main feature of our project is that for each category(cakes, t-shirts, painting, apparel, jewellery, furniture etc) user could get their request fulfilled.

Project mainly focuses on the two entities:-

User : User can add request for customized product , view biddings and then can choose the best deal.

Company : Companies can find potential customers and could fulfil their requests.

Feedback section will also be added for both users and companies, so that any issue could be detected and resolved.

Target Features :-

Customization

Just one platform required for variety of requests

Advantages :-

Time Saving

Easy

Lots of choices to choose from

Cost efficient (For both businesses and customers)

Businesses could save on cost of opening physical stores

Future Scope :-

Dark theme could be added

Support of multiple languages

Improve security

Limitations :-

Getting initial customers and companies would require marketing

Customer support (currently platform would be made to connect customer to the company)
